Mandatory deliverable

LAB | Provision a Windows VM Lab

Skills you will learn

Cloud Computing: Cloud Fundamentals

1. Introduction

In this hands-on lab, you will learn how to:

1. **Set up a Windows machine** on AWS Cloud.
2. **Connect to the Windows machine** using **Remote Desktop Protocol (RDP)**.

By the end of this lab, you will have a functional **Windows instance** running in AWS, accessible via **remote login**.

2. Requirements

- **AWS account** with an IAM user.
- **RDP client** (Remote Desktop on Windows/macOS, or PuTTY for alternative access).

3. Provisioning a Windows Virtual Machine (VM)

3.1 Launching an EC2 Instance

1. **Log in** to your AWS account.
2. Navigate to **EC2** in the AWS Management Console.
3. Click on **Instances** → **Launch Instances**.
4. Configure instance settings:
   - **Name**: `myserver-<your_name>`
   - **Application and OS Images**: Select **Windows**.
   - **Instance Type**: Choose a machine with at least 4gb of Memory RAM.
   - **Key Pair**: Create a new key pair:

Ask AI Tutor

- Enter a **name**.
- Select **key type**.
- Choose **.pem** format (used for password decryption).
- **Download the key file** and store it securely.

- **Networking**: Allow **RDP (port 3389)** and **HTTP traffic** from the internet.

5. Keep all other configurations **default** and click **Launch Instance**.
6. Wait for the instance status to change to `running`.

4. Retrieving the Windows Password

1. Navigate to the **EC2 Instances** section in AWS.
2. Select the instance you just deployed.
3. Click **Connect** → **RDP client**.
4. Click **Get Password**.
5. Upload the **.pem key file** used during instance creation.
6. Click **Decrypt Password** and **copy the password** for later use.

5. Connecting to the Windows Machine via RDP

5.1 Connecting on Windows (Remote Desktop Connection - mstsc)

1. Open **Run** (`Win + R`) and type:

```
mstsc
```

Copy Explain

2. In the **Remote Desktop Connection** window:
   - Enter the **public IP address** of your Windows instance.
   - Click **Connect**.
3. Enter the **username** (`Administrator`) and **decrypted password**.
4. Click **OK** to establish the connection.

5.2 Connecting on macOS (Microsoft Remote Desktop)

1. Download **Microsoft Remote Desktop** from the App Store.
2. Open the application and click **Add PC**.
3. Enter the **public IP address** of your Windows instance.
4. Click **Save**, then select the instance and click **Connect**.
5. Enter **Administrator** as the username and paste the **decrypted password**.

6. Click **Continue** to complete the connection.

6. Submission Guidelines

1. Take **screenshots** of the key steps:
   - EC2 instance provisioning.
   - Retrieving the password.
   - Connecting via RDP.
2. Compile screenshots into a **Google Doc or PDF**.
3. Upload the document to **Google Drive** and share the link with your instructor.
4. Ensure the instructor has the necessary **viewing permissions**.

🎉 **Congratulations!** You have successfully launched and connected to a **Windows machine on AWS**! 🚀
